The 4G Mobile Network is reshaping the future of communications services

Most construction sites require an instant, fast and reliable internet connection wherever they are geographically based, the challenge comes when traditional fixed line solutions are unavailable or the site requirement are only temporary. The 4G mobile data is now an accepted alternative to fixed Broadband, Ethernet or Wireless Connectivity.

Mobile communication services can take your business to the next level

When you need a secure business graded connection to order supplies, liaise with customers or communicate with colleagues our Sure Site Connect 4G solution is able to provide rapid broadband connectivity and voice phone lines even in the most remote site locations.

The solution includes a 4G LTE router preconfigured with a range of data only SIM packages all managed via the Real-time Mobile management portal. The professional 4G router delivers high performance for a range mission critical communication applications. Complete with a range of data allowances and telephone call bundles, the solution is ideal for a number of sectors including, Construction, Rail, Public Safety, Field Services and temporary Disaster Recovery locations.

- **Enhanced Disaster Recovery (DR) options including Auto-Failover Dual SIMS**
- **Extremely flexible and scale-able to meet all your future demands,**
- **Rapid Deployment with a range of Data Packages,**
- **Sure Hosted Voice services can be deployed for Remote Office locations,**
- **Choose any UK Geographical telephone number or retain your own.**
